

Mining and Mineral Processing

ACN Engineering aims to provide companies with rational technological solutions for their problems in the fields of mining, mineral processing, and extractive metallurgy that provide high efficiency and profit at low costs. We assist mining leaders in identifying mining prospects, addressing hidden productivity barriers, and boosting performance throughout the mining cycle.

Our teams of experts in the fields of mining, mineral processing, and extractive metallurgy will be able to help you maximize the utilization of the ores or raw materials to be extracted from the mines.

ACN has been providing world-class technical advice for technical mining solutions ranging from feasibility studies to professional geotechnical audits, so it's likely that we've encountered your problem before and found a superior, more efficient solution.

ACN has a specialized team of consultants committed to providing outstanding whole-of-mine optimization help for commercial mining results. Working with mining executives from across the world, ACN connects what's going on on the ground with the decisions that need to be taken in the boardroom using our patented tools and frameworks.

Our Services

To carry out or have carried out all kinds of research and development studies in the fields of earth sciences (geology, geophysics, mineral deposits, and mineralogy), mining, petroleum, mineral processing, and extractive metallurgy engineering, to carry out such R&D projects and to purchase or sell all kinds of services for this purpose
