

# ACN COLLABORATES WITH CLIENTS TO SOLVE COMPLEX CHALLENGES AND DEVELOP LEGACIES

ACN specializes in technically demanding engineering projects for a wide variety of sustainable design, high-rise buildings, general contracting, construction management, as well as renewable energy plants, power generation, and electrical transmission and distribution lines.

We offer a multidisciplinary approach and expertise to ensure the success of every project we run with our clients.

## ABOUT

ACN Engineering Co. has been involved in technically demanding tasks for a wide variety of engineering projects since its establishment.

ACN has a wealth of industry experience on a global scale in addition to the knowledge and experience of its management team. The main operating markets include of Turkey, the Gulf region, Eastern Europe, Sub-Saharan Africa, and Central and South Asia.

The company is confident in its capacity to complete projects, including high-rise buildings, road and bridge construction projects, dry ports, railroads, hydroelectric power plants, industrial facilities, power distribution networks, water distribution systems and environmental projects.

## SERVICES

### Civil Construction

The highest level of quality, safety, efficiency, and innovation is guaranteed on your projects by our comprehensive suite of construction services.

### Mining and Mineral Processing

We provide high-efficiency, low-cost technology solutions for mining. We help mining leaders uncover prospects and increase performance.

### Energy

Every renewable energy project has the potential to change the world. Clean energy development allows corporations and local governments to build a bright future for all.

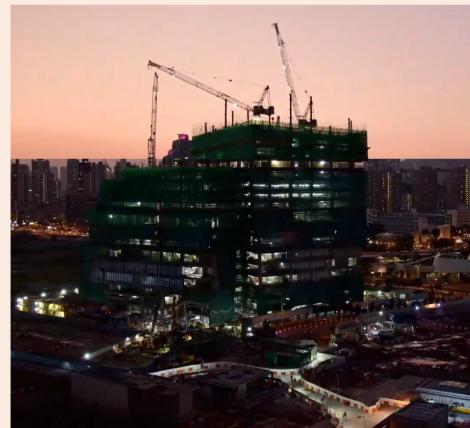

# PROJECTS

ACN aims to investigate all potential options on a worldwide scale

We collaborate with clients to tackle their most complex challenges and pioneer innovative solutions that have a positive, long-term impact by standing at the front of construction for important sectors through our strength, determination, and strong will.

Moving forward, we will make every effort to become a global leader by acquiring advanced technologies, diversifying abroad markets, and pursuing green construction.
